

CABLE BRACKET & BEARER COMPLETE SET

The Cable Bracket and Bearer Set is an essential support system used in manholes for securing and organising cables. Designed to keep cables off the ground, this set ensures proper cable management and protection within confined underground spaces.

The brackets are mounted on the manhole walls, while the bearers provide a stable platform for holding various types of cables. Constructed from durable, corrosion-resistant materials, the bracket and bearer set is designed to withstand harsh environments, minimising wear and tear on cables. This system not only optimises space within the manhole but also enhances safety and accessibility during maintenance.

CODE	DESCRIPTION	UNIT
E3030	Cable Bearer 12 - 350mm	1
E3041	Cable Bearer Wall Type 1 - 178mm	1

FEATURES & BENEFITS

- Multiple cable accommodation
- Space optimisation
- Corrosion-resistant materials
- Easy wall mounting
- Versatile application
