

CAPPING NO.22

BLACK PLASTIC CAPPING

PVC Capping No.22, designed for cables up to 19mm in diameter. This durable capping ensures secure and effective protection, with a length of 2440mm for versatile application. Black PVC riser guard used on walls and wooden poles for protected cable.

Ideal for various cable management needs, the PVC material provides reliable insulation and shielding against environmental elements. Whether used in residential, commercial, or industrial settings, Capping No.22 offers a practical solution to safeguarding cables effectively.

Used on walls and wooden poles for protected cable space.

PN	DESCRIPTION	UNIT
E2112	Capping No.22 Plastic	1

FEATURES & BENEFITS

- Specifically designed to protect cables during installation and maintenance.
- Provides a robust, durable cover for cables in external or internal applications.
- Manufactured with high-quality materials to ensure long-lasting performance.
- Lightweight and easy to handle, allowing for quick installation.
- Suitable for various cable types used in telecommunication networks.
- Weather-resistant and UV-stable for outdoor installations.

TECHNICAL CHARACTERISTICS

- Material: High-grade, UV-resistant plastic for long-term durability.
- Cable Dimensions: Suitable for 19mm cable diameter.
- Applications: Protects cables against physical damage and environmental exposure.
- Compatibility: Suitable for use with BT installations and other telecom systems.
- Installation: Secure and simple mounting process for fast deployment.
- Standards: Manufactured to meet industry-specific specifications and requirements.
- Length: 2440mm
