

GRATING SUMP 2A

PVC DRAINAGE SUMP

Grating Sump 2A is a robust drainage solution designed for efficient water management in both outdoor and industrial environments. Typically installed around telecommunications infrastructure or utility sites, this sump features a durable grating that allows water to flow through while preventing debris from entering the drainage system. Constructed to withstand heavy loads and harsh weather conditions, the Grating Sump 2A ensures reliable drainage, reducing the risk of flooding or water damage to critical infrastructure.
