

# TED® ROD CONTINUOUS SAFE NG

TED®

External radiobrake

Interchangeable guiding eyelets

Versatile end fitting

Flexible, secure, and robust, it is the essential tool to meet cable pulling & drawrope deployment job site requirements. The premium quality fiberglass rod of our TED® fish tapes offers an excellent balance between good tensile strength and elasticity.

The SAFE NG fish tape is equipped with an external brake system, allowing for the safe unwinding and rewinding of the fiberglass rod. The SAFE NG concept of the frame-reel offers usage in either a vertical or horizontal position, depending on the terrain configuration. The horizontal position is particularly suited for work on unstable or slippery surfaces (soil, gravel, pavement, etc.).

PN	DESIGNATION	PACKG
1001547	TED® Continuous rod Safe NG 6mm lg 60m	Unit
1001548	TED® Continuous rod Safe NG 6mm lg 80m	Unit
1001549	TED® Continuous rod Safe NG 6mm lg 100m	Unit
1001550	TED® Continuous rod Safe NG 6mm lg 150m	Unit

## FEATURES & BENEFITS

- Two working positions (horizontal and/or vertical)
- Product versatility: New end fitting compatible with detection probes
- Durability: replaceable wear part :
  - Frame: Interchangeable eyelets
  - Rod: Repair kit and/or refill coil (delivered without reel frame) for economic efficiency

## TECHNICAL SPECIFICATIONS

- PREMIUM Fibreglass
- Tubular steel frame
- External rapidbrake system for engineer's safety
- Versatile end fitting
- Interchangeable guiding eyelets

## REPLACEMENT RODS AND KITS

- Underground conduits are exposed to all kinds of dirt: mud, debris, sand... if your fish tape breaks, there are repair solutions available.
- TED® SAFE NG fish tapes offer a very high reparability rate, enhancing durability.
- Replacing the rod with refills is a very economical solution to extend the lifespan of the fish tape.
