

FIBRE SPLICING TABLE TRIPOD STAND SYSTEM

The splicing table is a clever workstation tripod stand system for the Fibre Optic installation industry. This Tri Splicer stand will easily straddle most chambers with the node securely positioned on the top, followed by the all-important splicer on the shelf below, making the fibre splicing job a breeze! This stand will not only save time per installation but will also improve the Engineer's posture. The kit also includes a mini tripod in case the Engineer needs to work with shorter cables or need to sit while working in a low ceiling environment (the splicer shelf can be switched between stands).

Dimensions: 90 x 23 x 12.5cm

Weight: 5kg

Packaging dimension: 104 x 35 x 12cm

FEATURES & BENEFITS

- Improve engineers posture
- Adjustable height
- Adjustable legs
- Portable and lightweight
- Sturdy and stable design
